             FUNCTION: HAS ANTI-ANDIGENIC PROPERTIES (BY SIMILARITY).

COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).

SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).

TISSUE SPECIFICITY: EXPRESSED SPECIFICALLY IN ADULT LUNG AND HEART AND LOW EXPRESSION DURING MOUSE DEVELOPMENT.

DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXPRACELLULAR MATRIX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                R HSSP; D: 2.26; -...

IFUNCION: CLEAVES AGGRECAN, A CARTILAGE PROTEOGLYCAN, AND MAY BE INVOLVED IN ITS TURNOVER. MAY PLAY AN IMPORTANT ROLE IN THE DESTRUCTION OF AGGRECAN IN ARTHRITIC DISEASES. MAY PLAY A ROLE IN PROTEOLYTIC PROCESSING MOSTLY DURING THE PERI:IMPLANTATION PERIOD.
--- CATALXTIC ACTIVITY: Cleaves aggrecan at the 392-Glu-[-Ala-393]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -1- COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).
-1- SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).
-1- DEVELOPMENTAL STAGE: EXPRESSED SPECIFICALLY IN THE PERI-
IMPLANTATION PERIOD IN EMBRYO AND TROPHOBLAST AND AT LOW OR UNDECTABLE LEVEL THEREAFTER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (POTENTIAL).

   COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY),
SUBCELULALR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).
TISSUE SPECIFICITY: ONLY EXPRESSED IN BRAIN.
DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE: DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.
FTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE. SIMILARITY: BELOWS TO PEPTIDASE FAMILY MIZB.
SIMILARITY: CONTAINS 1 ISP TYPE-1 DOMAIN.

-I-ALTERNATIVE PRODUCTS: 2 ISOFORMS; LPNPI (SHOWN HERE) AND SPNPI;
ARE PRODUCED BY ALTERNATIVE SPLICING. SPNPI HAS NO SIGNIFICANT N-PROCOLLAGEN PEPTIDASE ACTIVITY.

-I-TISSUE SPECIFICITY: EXPRESSED AT HIGH LEVEL IN SKIN, BONE, TENDON AND AND ARTA AND AT LOW LEVELS IN THYMUS AND BRAIN.

-I-DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-I DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.

-I-PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).
SUBURIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO COLLAGEN TYPE XIV (BY SIMILARITY).
SUBCELLULAR LOCATION: Secreted. Associated with the extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SIMILARITY).

--- DISEASE: Defects in ADAMTS2 are the cause of Ehlers-Danlos syndrome type VIC (EDS-VIC), a recessively inherited connectivetissue disorder characterized clinically by severe skin fragility and joint hypermobility and biochemically by the presence in skin of procollagen incompletely processed at the N-terminus.
--- SIMILARITY: CONTAINS 1 DISINITEGRIN-LIKE DOMAIN.
--- SIMILARITY: CONTAINS 4 TSP TYPE-1 DOMAINS.
--- CAUTION: HAS SOMETIMES BEEN REFERRED TO ADAMTS3.
                                                                                                                                                                                                                    Colige A., Sieron A.L., Li S.W., Schwarze U., Petty E.,

1- SUBUNIT: MAY BELONG TO A MULTIMERIC COMPLEX. BINDS SPECIFICALLY TO COLLAGEN TYPE XIV.
1- SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).
1- TISSUE SPECIFICITY: ENEXMATIC ACTIVITY IS DETECTED AT HIGH LEVEL IN ALL TYPE I COLLAGEN-RICH TISSUES SUCH AS SKIN, BONES, TENDONS AND AORTH AND AT LOW LEVEL IN BAIN AND THYMUS. THE MANA LEVELS WERE DISPROPORTIONATELY HIGH IN HEART, LIVER, RETINA AND MUSCLE.
1- DOWAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT FOR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.
1- PTM: THE N-TERMINUS IS BLOCKED.
1- PTM: THE PRECURSOR IS CLEAVED BY A FURIN ENDOPEPTIDASE (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SIMILARITY).

1- DISEASE: DEFECTS IN ADAMTS2 ARE THE CAUSE OF DERNATOSPARAXIS, A RECESSIVELY INHERITED DISORDER CHARACTERIZED BY SEVERE SKIN FRAGILITY AND BIOCHEMICALLY BY THE PRESENCE IN SKIN OF PROCOLLAGEN INOMPLEEFELY PROCESSED AT THE AMINO TENHUUG.

1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12B.

1- SIMILARITY: CONTAINS I DISINTEGRIN-LIKE DOMAIN.

1- SIMILARITY: CONTAINS 4 TSP TYPE-1 DOMAINS.

1- CAUTION: HAS SOMETIMES BEEN REFERRED TO ADAMTS3.
                                                                                                                                                                                                                                        COLLAGEN PRIOR

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
